

Report Description - Check for different inventory groups across store locations.

If you run Pastel Partner with an integrated inventory in a multi-stores environment, then you often need to check that your stock has the same inventory groups across all stores, especially if you value your inventory based on inventory groups. This check report will only list stock items that have more than one distinct count of inventory groups, across your stores. You can then correct the data in Partner and re-run on a regular basis.
